(54) SENSOR FOR DETECTING PACHINKO BALL

(57)Abstract:

PROBLEM TO BE SOLVED: To adequately detect that illegal radio wave is irradiated.

SOLUTION: A judging circuit 6 is constituted of a discriminating circuit 7 for changing an output signal based on an output from a resonance circuit and an output circuit 8 for outputting a signal with a waveform by which the existence of a Pachinko ball is judged based on the change of an oscillation frequency from the circuit 7. At least one transistor Tr2 to be in an on-state by generating a leak current in a base by the irradiation of radio wave is arranged in the output circuit 8. The transistor Tr2 outputs a radio wave detecting signal with a waveform being different from that of the signal for judging the existence of the Pachinko ball in the on-state.

LEGAL STATUS

[Date of request for examination]

25.02.2003

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
